

Survey Report:

The Mental Health Effects of Social Media Addiction

Prepared by: Bhavana Bhati

Date: [05-10-2025]

Target Group: Students & Young Adults (Ages 15–35)

Sample Size: [30 respondents]

Survey Method: Google Form

1. Introduction

This survey was conducted to study how excessive use of social media affects individuals' mental health, including anxiety, stress, sleep patterns, and self-esteem. Social media has become an inseparable part of daily life, but constant exposure can lead to emotional strain and dependency. The goal of this research is to understand both the positive and negative impacts of social media addiction.

2. Objectives of the Survey

- To analyze the average time spent on social media.
 - To identify the most used social media platforms.
 - To study the psychological effects such as anxiety, comparison, and sleep disturbances.
 - To understand whether social media provides any positive emotional benefits.
 - To collect suggestions for reducing social media addiction.
-
